SLLS033F – JANUARY 1988 – REVISED MARCH 1997

- Bi-MOS Technology With TTL and CMOS Compatibility
- Meets or Exceeds the Requirements of ANSI EIA/TIA-232-E and ITU Recommendation V.28
- Very Low Quiescent Current . . . 95 μA Typ V<sub>CC±</sub> = ±12 V
- Current-Limited Outputs . . . 10 mA Typ
- CMOS-and TTL-Compatible Inputs
- On-Chip Slew Rate Limited to 30 V/µs max
- Flexible Supply Voltage Range
- Characterized at V<sub>CC±</sub> of ±4.5 V and ±15 V
- Functionally Interchangeable With Texas Instruments SN75188, Motorola MC1488, and National Semiconductor DS14C88

#### description

The SN75C188 is a monolithic, low-power, quadruple line driver that interfaces data terminal equipment with data communications equipment. This device is designed to conform to ANSI Standard EIA/TIA-232-E.

An external diode in series with each supply-voltage terminal is needed to protect the SN75C188 under certain fault conditions to comply with EIA/TIA-232-E.

The SN75C188 is characterized for operation from 0°C to 70°C.

#### **Function Tables**

DRIVER 1					
В	Y				
Н	L				
L	Н				

	-	
Α	В	Y
Н	Н	L
L	х	Н
Х	L	Н

DRIVERS 2-4

H = high level, L = low level, X = don't care

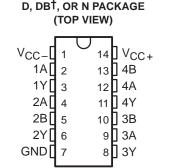

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

SLLS033F - JANUARY 1988 - REVISED MARCH 1997

#### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)<sup>†</sup>

Supply voltage, V <sub>CC+</sub> (see Note 1)	15 V
Supply voltage, V <sub>CC</sub> (see Note 1)	
Input voltage range, V <sub>I</sub>	$\dots$ V <sub>CC</sub> to V <sub>CC+</sub>
Output voltage range, VO	$\dots$ V <sub>CC</sub> $_{-6}$ V to V <sub>CC</sub> $_{+}$ +6 V
Continuous total power dissipation	See Dissipation Rating Table
Operating free-air temperature range, T <sub>A</sub>	0°C to 70°C
Storage temperature range, T <sub>stg</sub>	65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C

<sup>†</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to the network ground terminal.

PACKAGE	T <sub>A</sub> ≤ 25°C POWER RATING	DERATING FACTOR ABOVE T <sub>A</sub> = 25°C	T <sub>A</sub> = 70°C POWER RATING
D	950 mW	7.6 mW/°C	608 mW
DB	525 mW	4.2 mW/°C	336 mW
Ν	1150 mW	9.2 mW/°C	736 mW

#### recommended operating conditions

	MIN	NOM	MAX	UNIT
Supply voltage, V <sub>CC+</sub>	4.5	12	15	V
Supply voltage, V <sub>CC</sub> _	-4.5	-12	-15	V
Input voltage, VI	V <sub>CC</sub> -+2		V <sub>CC+</sub>	V
High-level Input voltage, VIH	2			V
Low-level Input voltage, VIL			0.8	V
Operating free-air temperature, T <sub>A</sub>	0		70	°C

SLLS033F - JANUARY 1988 - REVISED MARCH 1997

# electrical characteristics over operating free-air temperature range, $V_{CC+} = 12 \text{ V}$ , $V_{CC-} = -12 \text{ V}$ (unless otherwise noted)

	PARAMETER	TEST CONDITIONS				түр†	MAX	UNIT
Veri	High-level output voltage			V <sub>CC+</sub> = 5 V, V <sub>CC</sub> -=-5 V	4			v
VOH				V <sub>CC+</sub> = 12 V, V <sub>CC-</sub> = -12 V	10			v
Vei	Low-level output voltage		V <sub>CC+</sub> = 5 V, V <sub>CC-</sub> = -5 V			-4	V	
VOL	$V_{IH} = 2 V$ , $R_L = 3 k\Omega$	V <sub>CC+</sub> = 12 V, V <sub>CC</sub> - = -12 V			-10	v		
Ι <sub>ΙΗ</sub>	High-level input current	V <sub>1</sub> = 5 V					10	μA
۱ <sub>IL</sub>	Low-level input current	V <sub>I</sub> = 0					-10	μA
IOS(H)	High-level short-circuit output current <sup>‡</sup>	V <sub>1</sub> = 0.8 V,	$V_{I} = 0.8 V$ , $V_{O} = 0 \text{ or } V_{CC-}$				-19.5	mA
IOS(L)	Low-level short-circuit output current <sup>‡</sup>	$V_{I} = 2 V$ , $V_{O} = 0 \text{ or } V_{CC+}$			5.5	10	19.5	mA
٢O	Output resistance, power off	$V_{CC+} = 0,$	$V_{CC} = 0,$	$V_I = -2 V \text{ to } 2 V$	300			Ω
laa	Supply ourront from V/a a	V <sub>CC+</sub> = 5 V, No load	$V_{CC-} = -5 V,$	All inputs at 2 V or 0.8 V		90	160	
ICC+	Supply current from $V_{CC+}$	V <sub>CC+</sub> = 12 V, No load	$V_{CC-} = -12 V,$	All inputs at 2 V or 0.8 V		95	160	μΑ
	- · · · · ·	V <sub>CC+</sub> = 5 V, No load	$V_{CC-} = -5 V,$	All inputs at 2 V or 0.8 V		-90	-160	
ICC-	Supply current from V <sub>CC</sub> _	V <sub>CC+</sub> = 12 V, No load	V <sub>CC</sub> -=-12	All inputs at 2 V or 0.8 V		-95	-160	μA

<sup>†</sup> All typical values are at  $T_A = 25^{\circ}C$ .

<sup>‡</sup> Not more than one output should be shorted at a time.

NOTE 2: The algebraic convention, in which the more positive (less negative) limit is designated as maximum, is used in this data sheet for logic levels only; e.g., if -4 V is a maximum, the typical value is a more negative voltage.

### switching characteristics, V<sub>CC+</sub> = 12 V, V<sub>CC-</sub> = –12 V, T<sub>A</sub> = 25°C

PARAMETER		TEST CON	MIN	TYP	MAX	UNIT	
<sup>t</sup> PLH	Propagation delay time, low- to high-level output§	$R_L = 3 k\Omega$ ,	C <sub>L</sub> = 15 pF,			3	μs
<sup>t</sup> PHL	Propagation delay time, high- to low-level output§	See Figure 1				3.5	μs
<sup>t</sup> TLH	Transition time, low- to high-level output $\P$			0.53		3.2	μs
<sup>t</sup> THL	Transition time, high- to low-level output $\P$			0.53		3.2	μs
<sup>t</sup> TLH	Transition time, low- to high-level output#	$R_{L} = 3 k\Omega \text{ to } 7 k\Omega$	C <sub>L</sub> = 2500 pF,		1.5		μs
<sup>t</sup> THL	Transition time, high- to low-level output#	See Figure 1			1.5		μs
SR	Output slew rate§	$R_L = 3 k\Omega \text{ to } 7 k\Omega$ ,	C <sub>L</sub> = 15 pF	6	15	30	V/µs

§ Measured at the 50% level

 $\P$  Measured between the 10% and 90% points on the output waveform

# Measured between the 3-V and -3-V points on the output waveform (EIA/TIA-232-E conditions), all unused inputs tied either high or low

SLLS033F – JANUARY 1988 – REVISED MARCH 1997

#### PARAMETER MEASUREMENT INFORMATION

NOTES: A. The pulse generator has the following characteristics:  $t_W = 25 \ \mu s$ , PRR = 20 kHZ,  $Z_O = 50 \ \Omega$ ,  $t_f = t_f \le 50 \ ns$ . B. CL includes probe and jig capacitance.

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

#### **IMPORTANT NOTICE**

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
