

BIPOLAR ANALOG INTEGRATED CIRCUIT μ PC1335V

T-74-65-01

AUDIO POWER AMPLIFIER

DESCRIPTION

The μ PC1335V is a class B dual audio power amplifier designed for a music center and a radio cassette, and is encapsulated in a new 14 Pins vertical dual in line plastic package.

FEATURES

- High output power. 20 W (TYP.) @ $V_{CC} = 18$ V, $R_L = 8 \Omega$ (BTL)
5.5 W/ch (TYP.) @ $V_{CC} = 18$ V, $R_L = 8 \Omega$
7 W/ch (TYP.) @ $V_{CC} = 15$ V, $R_L = 4 \Omega$
5.7 W/ch (TYP.) @ $V_{CC} = 12$ V, $R_L = 3 \Omega$
4.6 W/ch (TYP.) @ $V_{CC} = 12$ V, $R_L = 4 \Omega$
- Wide operating voltage range. $V_{CC} = 6$ to 20 V
- Low quiescent current. $I_{CC} = 23$ mA (TYP.) @ $V_{CC} = 15$ V
- Low noise. $N_L = 0.25$ mV_{r.m.s.} (TYP.)
- High supply voltage rejection. SVR = 55 dB (TYP.)
- No shock noise at power supply switch on and off.
- Soft clipping wave form.
- Thermal shut down circuit is built in.
- Low thermal resistance : $R_{\theta(j-a)} = 3^\circ \text{C/W}$
- Very low number of external components, very simple mounting system with no electrical isolation between the package and the heat sink. (one screw only)

NOTES FOR USE

T-74-05-01

- (1) Adding a capacitor for phase compensation between Pin 1 (13) to Pin 3 (11), its value less than 47 pF is recommended, and the value of R_1 (R_2) and of C_6 (C_9) have to be chosen as follows.

$$R_1 (R_2) = 1 \Omega$$

$$C_6 (C_9) = 0.15 \mu F$$

- (2) At muting by shortage of Pin 7 to GND, ripple rejection is determined by following equation.

$$SVR = \left| 20 \log \frac{R_L}{200 + R_L} \right|$$

- (3) Keep the $\mu PC1335V$'s heat sink in shortage to GND or floating condition.
(4) Direct shortage between Pin 1 (13) to V_{CC} or GND will damage the $\mu PC1335V$.
(5) Keep some margin at design of external heat sink size.
(6) Use silicon grease and keep the torque of screw driver less than 10 kg·cm in attachment of a external heat sink.

14 PIN V-DIP (Unit: mm)
